

Comp 494 - Web Programming

Review Sheet #1 - Web Fundamentals

1. The client-server model is foundational to the web. Draw a diagram to represent this and label the pros and cons of each piece of the model.
2. When we use our local computer as both client and server, the Prof worries this creates a “localhost” effect that can taint our view of the web medium. Explain what the issue he worries about means and describe some real effects.
3. The web uses many different technologies. List the core technologies and their purposes:
 1. _____ - Used for:
 2. _____ - Used for:
 3. _____ - Used for:

4. How do we address things on the Web?

Write an example of one of these that allows you to label each piece

5. Which protocol does the browser use to request web pages?

Write an example request packet

Write an example response packet
